

### DATASHEET

Indoor/Outdoor 5-Port PoE Gigabit Switch with 802.3bt Input Power Support

Auto-Sensing IEEE 802.3af PoE Ports

Lightweight, Weatherproof Housing

Indoor/Outdoor Design with Versatile Mounts

### Overview

Build and expand your network with the UniFi® Switch Flex, model USW-Flex. It is a configurable Layer 2 Gigabit switch with auto-sensing 802.3af PoE. Five RJ45 Gigabit Ethernet ports provide one PoE input and four PoE output links to your devices.

#### **Switching Performance**

The USW-Flex offers the forwarding capacity to simultaneously process traffic on all ports at line rate without any packet loss.

#### **PoE Flexibility**

The USW-Flex features five Gigabit RJ45 ports to deliver robust performance and intelligent switching for your network.

Port 1 provides PoE input while ports 2-4 offer 802.3af PoE and provide up to 15W of power for your PoE devices. Products requiring 802.3af, such as G3 Flex cameras, are supported.

#### Indoor/Outdoor Design

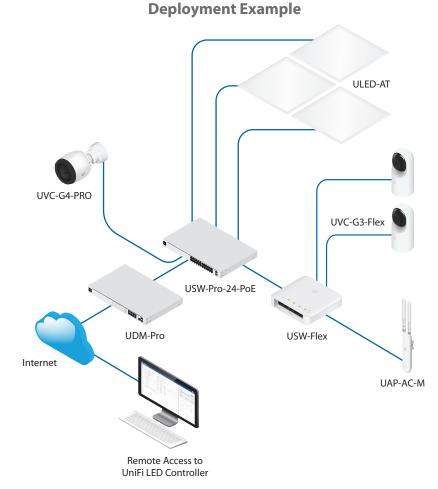

The USW-Flex can be installed horizontally or vertically and offers versatile mounting options: desktop, wall, and pole.

The weather-resistant USW-Flex can withstand extreme temperature variations. If the USW-Flex is installed at an exposed location outdoors, we recommend the UniFi Switch Flex Utility, model USW-Flex-Utility, which is designed for use with the USW-Flex.

#### **Outdoor Enclosure Accessory**

An outdoor weatherproof enclosure, the USW Flex Utility, is available as an optional accessory. It includes an Ethernet patch cable and a 60W PoE adapter, which provides a maximum PoE budget of 46W.

Easily mounted on a pole, the USW Flex Utility provides clean cable management and a screw lock for security.

The USW-Flex is powering the AC Mesh Access Point and multiple UVC-G3-Flex cameras..

## 

## Scalable UniFi Network Controller

#### **Management Capabilities**

The UniFi Network Controller can provision UniFi devices, map out networks, and quickly manage system traffic. Important network details are logically organized for a simplified, yet powerful, interface.

#### **Network Overview**

From a single pane of glass, view network topology and configuration, real-time statistics, and debugging metrics. Monitor your network's vitals and make on-the-fly adjustments as needed.

#### **Multi-Site Management**

A single controller running in the cloud can manage multiple sites: multiple, distributed deployments and multi-tenancy for managed service providers. Each site is logically separated and has its own configuration, maps, statistics, guest portal, and administrator accounts.

#### **Deep Packet Inspection**

Ubiquiti's proprietary Deep Packet Inspection (DPI) engine includes the latest application identification signatures to track which applications (and IP addresses) are using the most bandwidth.

#### **Detailed Analytics**

The UniFi Network Controller provides configurable reporting and analytics to manage large user populations and expedite troubleshooting. Advanced search and sorting capabilities make network management more efficient.

#### **Switch Port Status**

You can also view status information for each port:

- Connection speed and duplex mode
- TX/RX data rates
- Network/VLAN setting

#### **Switch Configuration**

You can access any managed UniFi Switch through the UniFi Controller to configure a variety of features:

- Operation mode (switching or mirroring) per port
- Network/VLAN configuration
- Jumbo frame services
- Network settings
- Debug terminal option for commandline interface

#### **Software Features**

The UniFi Network Controller software offers the following features:

- Centralized configuration management (including configuration cloning)
- Auto-MDIX automatically adjusts as needed for straight through or crossover cable
